ISO27001 PREPARATION SERVICE

" Binance, a leading global crypto exchange company, and blockchain ecosystem, today announced it has officially received ISO/IEC 27001 accreditation" (24 September 2019)

„Crypto.com, the pioneering payments and cryptocurrency platform, has officially received an ISO/IEC 27001:2013 certification" (10 May 2019)

Brokers.io is a worldwide brokerage specialized in trading cryptocurrency
„In 2019 we achieved ISO 27001 certification for the whole scope of the company" (24 June 2019)

Why did these companies decided to obtain ISO/IEC 27001 certification?

The ISO/IEC 27001 certification is a universally recognized accreditation issued by International Organization for Standardization (ISO). The standard is a specification for an information security management system (ISMS) that is designed to assist organizations in managing their information security processes aligned with international best practices. Maintaining an ISMS results in lower exposure to malicious attacks and to unintentional security breaches caused by internal staff.

Crypto finance companies attract hacker activities due to the highly valuable assets/funds stored or processed by their information systems. As crypto finance companies and offerings are gaining momentum, end-users will make educated decisions about which products and services to use and with which companies they trust to work with.

Accreditation demonstrates the company's commitment about security and its willingness to protect customer's data. Building trust with costumers and business partners in a competitive environment can be easily converted into business advantages. Dealing with sensitive and valuable costumer data, the most obvious way of building trust is increasing security and privacy.

Shift gears and target the next level of security to be able to expand your business!

Passing an ISO/IEC 27001 certification requires a risk management process and a comprehensive data protection framework implemented across the organization. As professional auditors, we understand the requirements, the necessary level of controls to be implemented and documentation to be created.
